

GE Aviation Career Seminar for graduate and senior students.

With the collaboration of METU Aerospace Students' Society and GE Aviation, a presentation will be given by GE Aviation to help the graduates or to-be-graduates plan their careers professionally. The presentation will take place in Aerospace Engineering Department's Conference Hall on 24.05.2017 Wednesday at 12.30.

The Edison Engineering Development Program (EEDP) is an intensive program for people who have a passion for technology, a drive for technical excellence, and share in GE's core values. The program is designed to accelerate participants' professional development through intense technical training and a variety of business-critical assignments. Edison graduates have the technical and business foundation to proactively and continually make innovative contributions to GE's future. If you love technology and want a career in engineering, the Edison Engineering Development Program is for you!

During the presentation, we'll have a small workshop in which the students have mock interviews, during which useful tips will be given. Also, a small competition will take place. If you win, you'll get a chance to take a technical tour of GE Aviation or a career coaching opportunity from GE Aviation.

Also, snacks will be served during the event.
